

For **people new to the country** we will introduce additional content about waste and recycling options that can be delivered as part of council run ESOL classes.

Cleaning roads daily – this is not possible at this time. As part of the decision to introduce alternate weekly collections in 2016, the council also scaled back the frequency of street cleaning which then exposed the high levels of regular fly tipping across Southall. The council recognises that it has not been able to deal with this efficiently and will be ending the contract with Amey by July 2020. Although not sustainable, the council is constantly reviewing and modifying street cleaning to keep on top of the demand; and will shift its efforts to work actively with residents on a Cleaner Southall campaign to reduce fly tipping. This should, over time, help the roads stay cleaner for longer.

The council will buy a **mobile CCTV** to help record those who fly tip rather than use the [waste and recycling](#) services.

However, a camera is limited – it cannot identify the culprit – this is where your local community intelligence will make the difference so please report a fly tipper on

www.ealing.gov.uk/report

More bins around fast-food outlets. Working group to be set up to consider:

a- piloting 'Big Belly' smart bins in suitable locations.

b- asking ward forums to host a 'favourite fast food retailer award' to incentivise retailers to reduce packaging and encourage their customers to dispose of their waste responsibly.

Use of traffic wardens for enforcement.

This is a good idea but is not possible in the foreseeable future as this would have to be done through a new style contract and the traffic wardens contract has already been let and will be in place for the next few years.

How to manage **waste from the new developments.** Planning applications require the developer to provide adequate storage and collection of waste. The working group could consider how to ensure that any waste storage and collection arrangements are reviewed within the first 12 months of full occupancy to check if they are fit for purpose.

Waste recycling facility in Southall. Ealing Council has 2 re-use and recycling centres; Acton and Greenford. This compares favourably to neighbouring councils - Brent 1, Hammersmith & Fulham 2 (1 for residents, 1 trade only), Harrow 1, Hillingdon 2, Hounslow 1, Richmond 1. Gordon Road location has been sold for housing development. Recycling and waste capacity is strategically reviewed across the West London area.
